

**How much testing is sufficient to test the system?**

Until you cover all cases and all edge cases. Enough to demonstrate the project works.

**Is JUnit sustainable for testing the correctness of Java code interactions with the database?**

Yes, we can run database functions to ensure the validity of our database code.

**How many test cases are enough for testing a code?**

1 for each possible action. There is no defined value.

**What do you do to make everything green?**

Add more test cases to make it more successful
